users, use of derivative transactions, investment of funds, operation of bank accounts, and the management of trust funds. However, the Minister of Finance may perform these activities on behalf of departments, subject to certain restrictions. Within 15 days of a department receiving an audit report in respect of the annual financial statements and statements of expenses and capital expenditure, the department's responsible Minister must present the annual report (including the audit report) to the House [13]. Before reading this Chapter, readers are encouraged to read Chapter 1 which provides information on relevant features of New Zealand's public financial management system including the adoption of accrual accounting and the nature of the financial reporting standards applied by the New Zealand Government. This position reflects the judgement that: Political commitment to a particular fiscal path is a key factor that influences whether a government actually sticks to it. They also include information on items that have not been recognised in the financial statements but which may have an impact on the financial statements in future periods - for example, commitments, contingent liabilities and contingent assets. Sometimes the Government may want to use resources in a declared emergency for which there is no appropriation or other authority. In determining appropriate levels of debt and net worth the Government is constrained by the principles of responsible fiscal management (refer Chapter 3). Present and future generations The seventh principle requires each Government to formulate fiscal strategy with regard to the impact on present and future generations. Treasury Instructions govern the payment of money from Crown Bank Accounts. Refer to Chapter 2 for further discussion of this responsibility. How have funds been obtained and used over time? The reports and statements required to be presented to the House of Representatives include: an annual fiscal strategy report an annual budget policy statement a periodic statement on the long-term fiscal position a periodic investment statement on the Crown's assets and liabilities regular economic and fiscal updates at least twice each year, and an annual statement of tax policy changes in the Budget economic and fiscal update. By including details of the document in which each appropriation's end-of-year performance information can be found, the statement of expenses and capital expenditure can act as a "road sign" for those interested in the non-financial performance information for a particular appropriation. The changes were introduced to align New Zealand's fiscal reporting with best international practice after assessing legislation in the United Kingdom and Austria, reviewing the best practice guidance issued by the IMF and OECD, and drawing on experience with the legislation since its introduction. Yes/No Explanation Payment of GST on purchases: No GST is not an expense and therefore does not require appropriation. Expenses or capital expenditure in excess of existing appropriations The Minister of Finance also has a limited authority to approve expenses or capital expenditure outside existing appropriation limits that have been incurred within the last three months of the financial year (section 26B). It also requires or allows some changes in the annual reporting requirements for entities that exist for less than the full financial year. Ensuring compliance with appropriation terms The Public Audit Act 2001 (section 15(2)) requires that the Auditor-General audit the appropriations administered by departments or Offices of Parliament. They therefore need to be vigilant to ensure that: appropriations are not exceeded unless the overspending is explicitly approved under another provision, and spending against an appropriation is within the scope (legal boundary) of the appropriation. Capital injection to a department (other than an intelligence and security department) No, but this authorisation in an Appropriation Act is required A capital injection to a department does not result in the incurrence of an expense or a capital expenditure. Offices of Parliament Offices of Parliament are required to prepare and publish strategic intentions and annual reports in a similar manner as departments. There is no further information in this guide about mixed ownership model companies or Schedule 4 organisations and Schedule 4A companies. There is a concern that allowing governments to set their own targets could lead to the adoption of weak fiscal targets. Standing Orders provide that only the second reading of the Appropriation (Supplementary Estimates) Bill is debated unless the Minister of Finance proposes an amendment or a select committee which examined the Supplementary Estimates recommended a change to a Vote. The Bonds are redeemable at face value on maturity. Factors influencing the development of the principles The requirements of Part 2 of the Public Finance Act are based on the requirements of the Fiscal Responsibility Act of 1994 and the 2013 amendments to the Public Finance Act 1989. Budget policy statement The budget policy statement focuses on the detailed priorities for the upcoming Budget. Currently these statements are: a statement of financial performance (also referred to as an operating statement) a statement of financial position (also referred to as a balance sheet) a cash flow statement a statement of changes in equity, and notes to the financial statements, comprising significant accounting policies and other explanatory notes including information on contingent liabilities and commitments. The focus on operating surpluses is, in part, intended to prevent governments from achieving prudent debt levels simply by selling assets. Departments have a choice about the document in which information on their strategic intentions is presented to the House of Representatives. For multi-category appropriations, the above information must also be provided for each category of expenses or capital expenditure within that appropriation (section 19C(2)). Departments are permitted to enter into guarantees or indemnities only of a type specified in regulations and must act in accordance with the terms and conditions of those regulations (section 65ZE). Liabilities are present obligations of the government that result from a past event. The legislation also requires a statement of the significant assumptions underlying the economic forecasts, which allows users to form their own views on the reasonableness and reliability of the forecasts. The extent to which governments should have regard to intergenerational-equity issues in determining fiscal policy is subjective. State-owned enterprise (SOE) SOEs are businesses (typically companies) listed in the First Schedule to the State-Owned Enterprises Act 1986. For example, amounts which the Government may pay in the future in respect of public pensions (such as New Zealand Superannuation) and social welfare benefits are not recorded as liabilities in the financial statements. A Supplementary Estimates document is also presented with each Appropriation (Supplementary Estimates) Bill (section 16). The annual financial statements, the audit report, and the statement of responsibility must remain publicly available online for at least the following five financial years (section 31). Targets Although the Act does not specify targets, it provides a framework within which each Government is required to set long-term fiscal objectives. To what extent could deficits from past years impact on future generations of taxpayers? Intelligence and security departments As discussed in Chapter 1, the requirements of the Act in relation to intelligence and security departments have been modified to take into account issues of national security. 2003: The new accounting standard for consolidated financial reporting (FRS 37) was adopted, requiring line-by-line consolidation of all controlled government entities. The Act allows for decisions, circumstances or statements to be withheld from disclosure if that disclosure is likely to: prejudice the substantial economic interests of New Zealand prejudice the security or defence of New Zealand or the international relations of the New Zealand Government compromise the Crown in a material way in negotiation, litigation or commercial activity, or result in material loss of value to the Crown. The financial statements of the Government reporting entity are required to include a statement of trust money administered by departments and Offices of Parliament (section 27(2)(c)). Amount Appropriations are limited by amount (section 8). Transfers between output expense appropriations The scope limitation on output expenses means that unused output expense appropriations cannot be diverted for another purpose. Duration: Expenses or revenue may have a one-off or a continuing effect. An Office of Parliament must discharge functions which the House itself might appropriately undertake. The latter five departments are also referred to as "Non-State Sector Act departments" or Non-Publicly Service departments". Any capital injection intended to increase a department's working capital must, except in emergencies (see pg. Thus, repayment of debt is not subject to annual budget approval by Parliament. Modification of reporting requirements in certain circumstances The Act modifies the reporting requirements applicable to most departments for Offices of Parliament and intelligence and security departments, to reflect their particular circumstances. They may also obtain independent assessments of reports and statements. Although New Zealand's fiscal position is affected by many factors outside the Government's control, the principles of responsible fiscal management encourage Ministers to constantly review the likely impact of the economic outlook on the fiscal position and take appropriate action. At its first meeting it confirmed the proposal of its predecessor body, the ASRB, to adopt a multi sector standard setting approach. In the case of a multi-category appropriation, the Estimates states the single over-arching purpose of the appropriation. The Crown must not make a capital injection to a department (other than an intelligence and security department) unless authorised under an Appropriation Act? Statement of financial position The statement of financial position presents information on the Government's assets and liabilities, recognised in accordance with GAAP. On the other hand, overspending and transfers between appropriations are strictly governed by the requirements of the Public Finance Act. Government Bonds - Denominated in New Zealand dollars with a fixed coupon paid semi-annually in arrears. In these cases the Government is able to incur expenses or capital expenditure, or approve capital injections, without a prior appropriation (sections 25 and 25A). In addition to those departments the Public Finance Act 1989 includes, the New Zealand Defence Force, New Zealand Police, Office of the Clerk, Parliamentary Service and the Parliamentary Counsel Office. This principle also aims to facilitate a greater level of public scrutiny of the Crown's management of its balance sheet. Notes [10] Unless a pre-election economic and fiscal update has been published since 1 October or is required to be published before 31 December (section 26S(4)) [11] The disclosure of less detail in interim financial statements is consistent with GAAP. The effective constraint on capital expenditure without further appropriation by departments (other than intelligence and security departments) is therefore the total amount of its net worth or net assets and its working capital. Issuing Securities The Act establishes requirements in relation to public securities including their issue, variation, terms and conditions and the making of payments in relation to securities. Strategic intentions are the public aspect of a department's overall strategic, planning, and reporting documentation, alongside documents such as strategic plans. The Act therefore gives the Secretary to the Treasury the power to: request information required by the Treasury or the Minister for the preparation of the financial statements (section 29A), and issue Treasury Instructions regarding matters such as accounting policies, financial statement representations, and the form in which information is to be provided (section 80). To enhance the transparency and credibility of the fiscal forecasts the Act requires, at a minimum, disclosure of underlying economic forecasts of New Zealand's GDP, consumer prices, employment and the current account of the balance of payments. The Government adopted Public Benefit Entity (PBE) IPSAS. This provision can only be used when: the amount transferred does not increase any appropriation for output expenses by more than 5% no other transfer under this mechanism to that appropriation has occurred during that financial year, and the total amount appropriated for output expenses in that Vote is unaltered. Intelligence and security departments Like other departments, intelligence and security departments are required to provide information on their strategic intentions. It is therefore important that the Government reports to Parliament on its expenses and revenue during the period, on whether it has achieved its financial objectives, and on how assets and liabilities have been administered. This Chapter: outlines the principles of responsible fiscal management in Part 2 of the Act and the intention of those requirements notes international developments in fiscal management describes the reports and statements prepared in accordance with the fiscal reporting requirements of Part 2 of the Act describes the responsibilities of the Treasury and Ministers in relation to fiscal reporting, and summarises, in an Appendix, the background to the Fiscal Responsibility Act 1994, the subsequent incorporation of that Act into the Public Finance Act 1989 and the Public Finance (Fiscal Responsibility) Amendment Act 2013. After the end of the financial year, departments' annual reports must contain a statement of budgeted and actual expenses and capital expenditure incurred against each appropriation they administer, and against each category of expenses or non-departmental capital expenditure included in any multi-category appropriations they administer. Net worth The third principle requires that each Government maintains a level of net worth that provides a buffer against adverse risks such as economic shocks and demographic changes. Statement of financial performance (operating statement) The statement of financial performance reports the Government's income (revenue and gains) and expenses. The statement of financial performance helps users considering the following questions: Is the government operating at a sustainable level (for example, are the costs of government being met by revenue or are they being deferred to the future)? Annual Most appropriations are annual appropriations - that is, they are authorised for one financial year. This audit is an ex-post or "after the fact" audit and the assurance on this audit is provided to the House after the end of the financial year. International developments New Zealand was one of the first countries to legislate principles of responsible fiscal management and require a comprehensive suite of fiscal reports on a government's short- and long-term fiscal outlook. They are also required to provide information to the Treasury. Each department collecting money on behalf of the Crown is therefore required to deposit this money in a specified Crown Bank Account. Budgeting and Reporting Documents in a Typical Year Appropriations (Chapter 2) Fiscal Responsibility (Chapter 3) Whole of Government Financial Statements (Chapter 4) Departmental Reporting (Chapter 5) PRE FINANCIAL YEAR December Budget Policy Statement January-April May BUDGET DAY Appropriation (Estimates) Bill introduced Estimates and supporting information tabled Fiscal Strategy Report Economic and Fiscal Update June First Imprest Supply Bill introduced and passed FINANCIAL YEAR July August September Appropriation (Estimates) Act passed First Imprest Supply Act repealed Second Imprest Supply Bill introduced and passed October Monthly Statements (to 30 September) November Monthly Statements (to 31 October) December Half Year Economic and Fiscal Update January Monthly Statements (to 30 November) February Monthly Statements (to 31 December) Monthly Statements (to 31 January) March Monthly Statements (to 28/29 February) April Monthly Statements (to 31 March) May Appropriation (Supplementary Estimates) Bill introduced Monthly Statements (to 30 April) June Appropriation (Supplementary Estimates) Act passed Monthly Statements (to 31 May) POST FINANCIAL YEAR July August September October Performance information on what has been achieved with appropriations Annual Financial Statements of the Government Annual Report November December Appropriation (Confirmation and Validation) Bill introduced and report containing appropriation Ministers' explanations for unappropriated expenditure. Emergencies When there is a national disaster or civil emergency the Government may need to act quickly. The requirement for this statement was introduced in 2004. Amongst other things, departments making payments on behalf of the Crown (including refunds of Crown revenue) are to make such payments from a Crown Bank Account approved by the Treasury for that purpose and comply with any Notice of Delegation Regarding Crown Bank Accounts issued by the Treasury. Parliamentary scrutiny Once reports and statements have been presented to the House of Representatives, Standing Orders provide for the fiscal strategy reports, economic and fiscal updates, statements of long-term fiscal position and investment statements to stand referred to the Finance and Expenditure Committee (FEC). A department's chief executive is responsible for what is achieved with departmental output expense appropriations and can decide whether to make the required outputs in-house or buy them in. Imprest supply authority As noted previously, imprest supply is a statutory mechanism that allows Parliament to provide the Government with the authority to incur expenses or capital expenditure in advance of appropriation by way of an Appropriation Act. Although disclosure of the net investment is useful, it does not provide readers with any indication of the revenues and expenses, assets and liabilities or cash flows of the entities concerned. The Government reporting entity, as defined in the Act, consists of these three branches and the Sovereign in right of New Zealand (section 2(1)). The XRB is also subject to the Crown Entities Act 2004. Departments may operate their own bank accounts. New Zealand has adopted these constitutional principles. The auditor forms an opinion as to whether the financial statements: comply with generally accepted accounting practice in New Zealand, in accordance with Public Sector Public Benefit Entity Accounting Standards presented fairly, in all material respects, the financial position and borrowings of the reporting entity as at the balance date, and present fairly, in all material respects, the financial performance and cash flows, unappropriated expenditure, emergency expenses and capital expenditure, and trust money administered by departments for the year ended on that date. The budget policy statement: contributes to fiscal transparency. Information on all changes to the information provided in the main Estimates as a consequence of the Appropriation (Supplementary Estimates) Bill must be provided. Accordingly, any statement of scope for an appropriation needs to be sufficiently specific about the range of activities, actions or functions covered to allow an external judgement to be made about whether the Crown has complied with its terms. Rating agencies assess the Government's creditworthiness for the capital markets. Each type of appropriation is discussed below. Borrowing expenses Borrowing expenses include interest and other financing expenses for loans or public securities. Contents of the financial statements The annual financial statements of the Government are required to include those statements required by GAAP (section 27(2)(a)). The OECD Best Practices for Budget Transparency are designed as a reference tool for member and non-member countries to use in order to increase the degree of budget transparency in their respective countries. General guidance on some of the operational aspects of managing non-departmental transactions or balances is found in Treasury Instructions. Because the accrual basis recognises expenses when they are incurred rather than when they are paid, there are limited incentives to shift payments between periods inappropriately. Departments are therefore required to prepare similar types of financial statements as other reporting entities in New Zealand. Cash flows from investing activities - These include the sale and purchase of physical assets and advances such as student loans and investments. The schedules themselves also show additional sections of the CEA applicable to each organisation or company. Departments and Offices of Parliament (Refer Chapter 5) Whole of Government (Refer Chapter 4) Financial Statements Annual financial statements Accrual basis Comply with GAAP Audited Monthly and annual consolidated financial statements Accrual basis Comply with GAAP Annual statements are audited financial forecasts Prepared on the same basis as the financial statements Prepared on the same basis as the financial statements The accrual basis of accounting was adopted by the New Zealand Government because it provides a more comprehensive set of information than cash accounting. Parliament authorises the Minister or Ministers responsible for appropriations (the appropriation Minister/s) within a Vote to incur the expenses or capital expenditure outlined in the appropriations. Chapter 4 outlines the requirements for consolidated financial statements of the Government reporting entity set out in Part 3 of the Act. Publishing fiscal policy intentions Part 2 of the Public Finance Act requires each Government to set out its fiscal policy and to describe the relationship between this policy and the principles of responsible fiscal management. Cash flows from financing activities - These include the raising and repayment of New Zealand-dollar and foreign-currency debt. Coupon Interest is payable quarterly in arrears on the Capital Value of the Bonds. Appropriation Bill a bill seeking authority from Parliament for the Crown and Offices of Parliament to incur expenses or capital expenditure, or in the case of an Appropriation (Confirmation and Validation) Bill, a bill seeking Parliament's confirmation or validation of matters relating to the previous financial year. However, appropriations are required where: ministerial decisions or actions cause unfavourable changes in the carrying amounts of assets or liabilities. Government departments began to report in accordance with accrual accounting. Other, more specific responsibilities in relation to departmental financial management, performance and reporting are set out elsewhere in the Act, or may be imposed by instruments allowed by the Act, or other Acts. External Reporting Board (XRB) An independent Crown Entity responsible for accounting and auditing & assurance standards in New Zealand. Cash flows are classified and presented in the following three categories: Cash flows from operations - These represent all cash flows other than those associated with investing and financing activities, and include taxation and operating receipts and payments. Monthly statements are not required for July or August due to the limited information value to external users of variances for these first two months of the financial year. 2014: The basis of accounting standards in New Zealand moved to International Public Sector Accounting Standards (IPSAS). The Government uses independently established rules for financial reporting in order to give users of reports a high level of confidence in the relevance and reliability of the information. Many of the assets and liabilities reported in the financial statements of the Government are similar to the assets and liabilities reported in the financial statements of other entities. A department's chief executive is responsible for the financial management of, and reporting on, non-departmental expense and capital expenditure appropriations administered by that department, and for advising the appropriation Minister on the efficiency and effectiveness of expenditure under those appropriations. Fiscal risks The fourth principle requires that each Government identifies and manages prudently the fiscal risks facing the Government. For each appropriation the Estimates include details of the Vote, appropriation Minister, appropriation administrator and appropriation type, amount, scope and period. Two examples of specific financial management responsibilities which have arisen from decisions made by Cabinet include expectations for the management of investments in both physical and intangible assets and management of foreign exchange exposures. Statements of expenses and capital expenditure should include: a statement of the budgeted and actual expenses and capital expenditure incurred against each appropriation administered by the department, and against each category of expenditure included in a multi-category appropriation administered by the department for each appropriation, details of the document in which the end-of-year performance information is presented to the House of Representatives a statement of unappropriated expenses and capital expenditure, together with an explanation of the reasons for the unappropriated spending a statement of authorised and actual capital injections made to the department, and a statement of any unauthorised capital injections made to the department, together with an explanation of the reasons for this (section 45A). It involves ready access to reliable, comprehensive, timely, understandable, and internationally comparable information on government activities ... so that the electorate and financial markets can accurately assess the government's financial position and the true costs and benefits of government activities, including their present and future economic and social implications." (Kopits and Symansky, 1998) Principles of responsible fiscal management At the core of the Act's fiscal responsibility provisions are a set of principles of responsible fiscal management. The \$2m loss on sale would require an appropriation (other expense). Type Different types of expenditure have different features when being scrutinised for effectiveness and efficiency. Examples of the actions that Ministers have taken in order to manage New Zealand's fiscal position include: reorganising the set of government rights and obligations that make up the balance sheet (for example, by fully hedging foreign currency debt and reconfiguring assets and liabilities) exerting greater fiscal control over levels of spending, and engaging in high-level prioritisation of spending (Warren and Barnes, 2003). Monitoring spending Money may not be paid out of a Departmental Bank Account or a Crown Bank Account except in accordance with an appropriation or other authority by or under an Act (section 5 and section 65V(1)). The Treasury is responsible for monitoring and reporting on any expenses or capital expenditure incurred without appropriation or statutory authority (section 65Y). Fiscal strategy report The fiscal strategy report sets out each Government's high-level fiscal strategy. The alternative, the Government setting its own standards, was rejected because of the credibility issues that this would raise. Resilient government finances are a precondition to improving long-term living standards. The annual financial statements of the Government for the financial year ending on 30 June must be prepared within two months, and audited within three months, of the end of the financial year (section 30). United Kingdom The framework within which the United Kingdom Government formulates and implements fiscal policy is set out in the Budget Responsibility and National Audit Act 2011. The use of imprest supply is also monitored by the Controller and Auditor-General. There may be more than one Supplementary Estimates Bill but this is very rare. Loss on revaluation of asset (departmental and non-departmental) No As long as the loss met the criteria for being a remeasurement (that is, it was not the result of a government decision), no appropriation would be required. The Minister is responsible for: communicating all policy decisions and circumstances with material fiscal or economic implications to the Treasury and asserting responsibility for the integrity of the disclosures in the update, for their consistency with Part 2 of the Act, and for the omission of any decisions, circumstances or statements that have been withheld under the provisions of the Act. This Chapter: explains what an appropriation is and the purpose of appropriations describes the legislative process for appropriations and the link between appropriations and the budget process outlines the responsibilities of Ministers, departments and the Treasury in relation to appropriations describes the various types of appropriations, the requirements in relation to specifying and using these appropriations and the consequences of breaching the limits of an appropriation explains how the usual appropriation requirements are varied in respect of Offices of Parliament and intelligence and security departments, and explains how the controller function operates. The Auditor-General is responsible for expressing an independent opinion on the annual financial statements of the Government. Appropriations are generally for a fixed amount (one exception being revenue dependent appropriations described later in this chapter in the section on Flexibilities in appropriations) and specified in New Zealand dollars. For example: the expenditure baselines that project government expenditure forward into future years are framed by current appropriation specifications, and when considering proposals for changes to expenditure baselines for items such as new budget initiatives, departments will make financial recommendations and Ministers will record decisions on those recommendations. Disclosure of specific fiscal risks Every economic and fiscal update must incorporate to the fullest extent possible all government decisions and other circumstances that may have a material effect on the fiscal and economic outlook. The Act provides for different categories of Crown entities with each category having its own framework for governance, clarifies the powers and duties of board members in respect of the governance and operation of Crown entities and sets out reporting and accountability requirements for Crown entities. This indicator represents total Crown revenue less total Crown expenses excluding minority interest share. Appropriation administrator In relation to an appropriation to the Crown the Department that administers the appropriation(s) in a Vote on behalf of the appropriation Minister(s), and in relation to an appropriation made to an Office of Parliament, means that Office of Parliament. In addition, where the Treasury establishes a Crown Bank Account for use by a department, the formal Notice of Delegation will specify the requirements in relation to that bank account. Accrual accounting concepts and statements Each individual reporting entity (for example, a department) and the Government as a whole prepare financial forecasts and statements using the accrual basis of accounting. For each appropriation the Minister of Finance can approve an amount up to the greater of \$10,000 or 2 percent of the total amount appropriated for that appropriation. Accrual budgets provide a more comprehensive financial picture of proposed activities and the impact of those proposals on the operating costs of individual entities. In preparing the update the Treasury must: include all information communicated by the Minister exclude information withheld by the Minister under the provisions of the Act, and use its best professional judgement. Further information about mixed ownership model companies (and the Crown's commercial portfolio) can be found on the Treasury website[2]. Its primary audience is likely to be staff in Government departments, Offices of Parliament and others who need a working understanding of the Act. The Act requires that the financial statements (and financial forecasts) of the Government and each individual department be prepared in accordance with generally accepted accounting practice (GAAP) in New Zealand. Key Points It is important that departments understand the limits of their powers. These principles aim to capture dimensions of good fiscal policy: Each principle is discussed in turn. These measures are known as the Controller function. The Act also sets out the duty of the Office for Budget Responsibility (OBR) to independently examine and report on the sustainability of the public finances. An accrual budgeting system focuses on costs to be incurred rather than funds to be obligated or spent. Each economic and fiscal update must contain economic and fiscal forecasts for the year to which the update relates and the subsequent two years. Treasury Instructions can be accessed on the Treasury's website. The results of these annual reviews are reported back to the House. Imprest supply is required as the main Appropriation Bill for the year is not normally passed before the beginning of the financial year; and because the changing nature of Government activities and unexpected demands means it is impossible to adequately foresee all future expenses and capital expenditures by the time the main Appropriation Bill is finalised for introduction. Refer also to Chapter 5. Offices of Parliament The primary function of an Office of Parliament is to be a check on the Executive, as part of Parliament's constitutional role of ensuring the accountability of the Executive. Depreciation of departmental asset Yes Departmental output expenses. Annual reports are a prime source of information for parliamentary select committees when conducting annual reviews of the performance and current operations of departments, as provided for in Standing Orders of the House of Representatives. A department or departmental agency most recently identified in the information supporting the Estimates as the performance reporter for an appropriation must provide that performance information to the Auditor-General within 2 months after the end of the financial year. The audit of appropriations involves: determining whether transactions and events are appropriately authorised and within relevant appropriations testing whether an expense and/or capital expenditure charged against an appropriation has been incurred for the purpose for which it was appropriated, and ensuring that expenses incurred are for lawful purposes. Supplementary Estimates are also examined by select committee, usually the Finance and Expenditure Select Committee. The Crown Entities Act 2004 provides a consistent framework for the establishment, governance, and operation of Crown entities and to clarify accountability relationships between Crown entities, their board members, their responsible Ministers on behalf of the Crown, and the House of Representatives. Revenue The fifth principle reflects the importance of stability in tax rates for private sector planning and decision making. Figure 1: Net Public Debt Note: the measure of core Crown net debt changed in 1992. A legislated rule specifies in the law a numerical limit or goal in respect of one or more budget aggregates. Such amounts must be included in a subsequent Appropriation Bill, usually the Appropriation (Confirmation and Validation) Bill for confirmation by Parliament. The independence of the Auditor-General, as an Officer of Parliament, enhances the integrity of the financial statements. Select committees can examine documents and require the attendance of individuals, including Ministers and officials. The Government's main source of revenue is income tax and other taxes obtained from the use of sovereign powers. Financial management and financial performance A chief executive's key financial management responsibilities are to establish a system of internal control and to ensure that the department's end-of-year performance information is accurate. Purpose Annual reports provide a way for departments to explain to a wider audience what they have done and how well they have performed during the year. This mechanism is usually used only late in June. Guarantees and indemnities can be found in a range of standard contracts; including computer services contracts, consulting contracts, insurance contracts and lease agreements, and are not always identified as such. This statement sets out new government tax policy decisions that have resulted in a material change to the tax revenue forecasts for the financial year to which the update relates and for at least the next two financial years. Within 15 days of receiving an audit report in respect of end-of-year performance information, the performance reporter must provide the information and audit report to the appropriation administrator (unless the performance reporter is the appropriation administrator). During the financial year, they are responsible for carrying out their activities in accordance with appropriations. In New Zealand, the Constitution Act (section 22) expresses this principle of public finance. The Act requires a department to provide the Auditor-General with its annual financial statements and statements of expenses and capital expenditure within two months after the end of the financial year. This allows both fiscal targets and measures to achieve those targets to be scrutinised by Parliament and the public. Because guarantees and indemnities can result in the creation of liabilities it is essential that guarantees and indemnities are strictly controlled and monitored. Constitutional role Traditionally, in Westminster-based parliamentary systems, the Crown may pay, borrow or spend only as authorised by Parliament. In addition it should be a useful reference for Crown entities, Schedule 4 organisations, Schedule 4A companies, Members of Parliament and their staff, and interested members of the public, including students and readers from other jurisdictions with an interest in public financial management in New Zealand. Notes [5] Readers interested in the development of the Westminster parliamentary system are referred to Parliamentary Practice in New Zealand (4th Ed.) found at [6] There are other statutory authorities in existence. The 2004 changes are consistent with the overall requirements of the 1994 legislation. A department's strategic plans should all be derived from the same strategic planning process. Since 1989, appropriations have been accrual-based. These responsibilities are established in a variety of ways including the Act itself, delegations, Treasury Instructions, Minister of Finance Instructions, Regulations, and decisions made by, or under the authority of, Cabinet. The approved derivative instruments are subject to change. For example, imprest supply pg. The monthly financial statements contain less detail than the annual financial statements.[11] The monthly financial statements are required to include the following two comparatives to the actual year-to-date figures: budgeted year to date figures, and actual year to date figures for the previous financial year (section 31A(2)). The Minister may not delegate this power in the same way that other powers are delegated under the State Sector Act (section 48). Also, under the financial veto rule (contained in Standing Orders) the Government can veto proposed amendments to the Estimates that, in its view, would have more than a minor impact on the composition of a Vote. 26. The 1994 Act aimed to address these problems and achieve better fiscal outcomes by: strengthening the incentives on Ministers to co-operate in setting priorities and to follow an agreed fiscal strategy, and providing more regular information to the public on the medium-term fiscal outlook and the decisions that underpinned that outlook. The statement of financial position helps users consider the following questions: Has the financial strength of the Government improved or deteriorated? This means that public sector financial statements can be more readily understood by a wide range of people. The 1994 Act was intended to require transparent reporting of a Government's fiscal intentions and to encourage Governments to consider the long-term consequences of policy decisions (see Appendix 2). The Bonds are redeemable on maturity or at the option of the bondholder. The department's annual report must include a statement of actual expenses or capital expenditure incurred against each appropriation, and a statement of unappropriated expenses and capital expenditure in respect of both departmental and non-departmental activities administered by the department (section 45A). The Treasury provides guidance to assist in determining the scope of output expenses. Independent audit Public sector organisations are accountable to Parliament for their use of public resources and the exercise of powers conferred by Parliament. The Government uses these statements to give a comprehensive account of its use of resources and its assets and liabilities. This enhances the comparability of information between entities. The annual report must be presented to the Minister responsible for the departmental agency's performance, and to the Minister responsible for the departmental agency's host department. The reasons for this are: the difficulties with the preparation of a tax expenditure statement (for example, defining the boundaries of tax expenditure, and in obtaining reliable data on the cost and extent of a tax expenditure), and the cost of current tax expenditures in New Zealand is relatively low. As with other types of appropriations, the scope for other expenses should be specific enough to act as an effective constraint against non-authorised activity, but not to inappropriately constrain activity that is intended to be authorised by the appropriation. The XRB has issued the financial reporting standard PBE FRS 49 "Service Performance Reporting" for this purpose. Crown Includes all Ministers of the Crown and all departments, but does not include Offices of Parliament, Crown entities or State enterprises. This statement is intended to lead to more comprehensive reporting on issues that could adversely impact on fiscal sustainability and in this way to assist the Government in making decisions that are consistent with the principles of responsible fiscal management. The key financial statements are a statement of financial performance (sometimes called an operating statement or an income statement) a statement of financial position (sometimes called a balance sheet), and a statement of cash flows. The Government adopted New Zealand IFRS reporting. Standing Orders require select committees to report back on the Estimates within ten weeks of the delivery of the Budget. Among other requirements, this circular: Specifies the requirements for Long Term Investment Plans and investor confidence ratings, Sets expectations relating to reporting on investment performance, and Sets Cabinet, minister and chief executive approval thresholds for investments. Rating agencies are primarily concerned with a government's ability to service debt and to repay that debt when it falls due. The Secretary to the Treasury relies on the Minister to provide information on all the relevant decisions and circumstances to enable the Treasury to produce credible economic and fiscal updates. The types of appropriations are output expenses, benefits or related expenses, borrowing expenses, other expenses, capital expenditure, multi-category appropriations, and expenses and capital expenditure of an intelligence and security department. Although not specified in the legislation there are a number of expectations about scope in practice.
